

Lab 2

LAB 2

SECTION C

Akash Patel

SUBMISSION DATE: 2/13/19

2/13/19

Problem

The purpose is to solve problems using simple arithmetic, and work with C integer and floating-point math.

Analysis

I learned more about integer and floating-point math used in C. I had trouble getting the outputs but in the end I learned that all I had to do was use %d or %lf.

Design

For 2_2_1 I had to compile and debug a code for getting an area of a rectangle. For 2_2_2 I had to get the volume of an x by z rectangular prism. I modified it by adding one side input and using the volume formula. For 2_3 I had to describe the reason and correct the problem. For 2_4 I had to perform arithmetic operations, so I just wrote each equation on new lines and got the output and printed it. For 2_5 I wrote a program that would use the Pythagorean theorem to compute one side length of a triangle when given two sides.

Testing

This lab was fairly simple so I just compiled and ran the programs until they worked. I had a few compiling issues due to syntax but that's about it.

Comments

This was a simple lab but I shouldn't have procrastinated on it. I should have got it done much sooner.
